Abstract

This project provides highlight for AsciiDoc source files in applications using `gtksourceview-2.0`.

Syntax highlight for AsciiDoc is already present for **Vim** and **GNU Emacs**. But these editors are too complex and require special learning to use them. This project is for people working with more user-friendly editors, such as **gedit**.

1 License

This project is Open-source, released under **GNU Lesser General Public License, version 2.1**, the same license as used by **GtkSourceView**

2 Installation

Just copy `asciidoc.lang` file to appropriate directory:

2.1 On Linux:

The file should be copied here:

```
/usr/share/gtksourceview-2.0/language-specs/
```

2.2 On Windows:

If you have installed gedit for Windows in default location, the file should be copied here:

```
C:\Program Files\gedit\share\gtksourceview-2.0\language-specs\
```

3 Usage

The gedit recognises `.asciidoc` file extension automatically. If you are using another extension, just select appropriate highlight mode from Main Menu:

View → Highlight Mode → Markup → AsciiDoc

4 Feedback

If you have any questions or suggestions feel free to use this contact information:
